Onspring AI

Intelligent Automation and Connected Data Platform

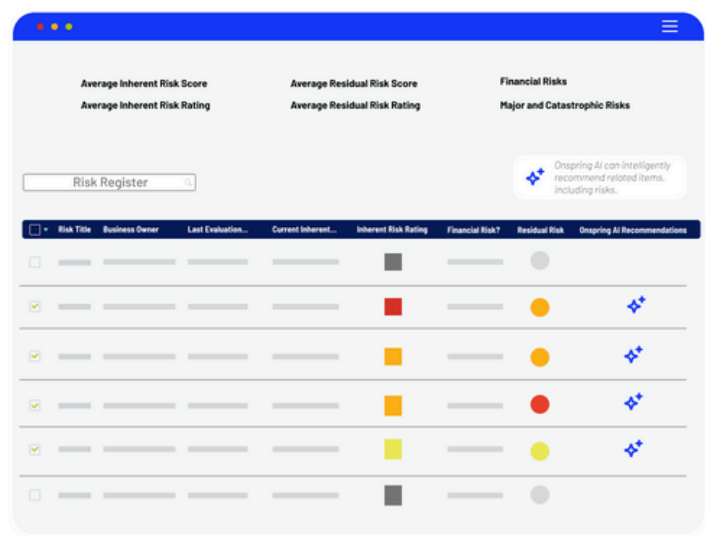

Why choose Onspring AI?

GRC teams face increasing workloads and limited resources, often getting bogged down in manual, repetitive tasks. This prevents them from focusing on high-value strategic initiatives that drive business growth and enhance revenue.

Since GRC teams are unlikely to expand, the answer for many businesses is to leverage AI. Analysts concur, with Gartner predicting that over 50% of major enterprises will use AI for continuous regulatory compliance checks by the end of 2025. In a study from Cloudera, over half of organizations plan to use AI, but face challenges with data privacy, integration and implementation costs.

Onspring AI is built into the Onspring platform, offering enterprise-wide intelligence and automation across all GRC functions. Unlike point solutions, Onspring AI provides unified visibility and enables proactive risk and compliance management at scale, all while prioritizing governance and privacy.

Onspring AI is offered as a flexible add-on, giving your organization the opportunity to license it based on your enterprise’s specific needs and requirements.

Surface relevant links between risks or let Onspring recommend the best suited analyst to handle an issue, eliminating the need for multiple searches to find relevant information.

Key Benefits for Onspring AI

Accelerated Content Creation: Leverage AI to generate clear GRC documentation.

Predictive Thought Completion: Transform an empty text field into a productive starting point. Onspring AI intelligently suggests the most likely next words or phrases, reducing time spent on repetitive data entry and accelerating critical GRC document creation.

Text Field Generation: With Onspring AI, users can leverage prompts to generate or revise long-form field content with clarity and consistency, enhancing standardization across records.

Record Creation: Create plans, tasks and more from simple questions and prompts, with AI refining and embedding relevant values directly into fields in real-time, reducing manual entry.

The screenshot displays the Onspring AI interface. On the left is a form titled 'Related Due Diligence Activity'. It includes a 'Due Diligence Activity' section with filters for 'Due Diligence Id', 'Quarter', 'Year', and 'Activity'. Below this is a 'Response Summary' section with a 'Response Status' dropdown (currently set to 'Not Started') and a 'Responded By' field. Further down is a 'Response Notes' section with a text area. At the bottom is a 'Files and Supporting Documentation' section with a file upload icon and a 'Name' field. On the right is an 'Onspring AI' chat window. It contains a prompt: 'Please review the attachment and summarize the document. Provide any risks that can be found in the document and determine if additional information is needed. Place the summary in the Response Notes field.' Below the prompt, the AI's response is visible: 'I'll provide a comprehensive summary of the Audit Report'. At the bottom of the chat window is a text input field with the placeholder 'Messaging Onspring AI...' and a send button.

From lengthy audit reports to actionable insights in an instant! Onspring AI can read, summarize and populate key fields, freeing your team to focus on strategic compliance, not manual data entry.

Key Benefits for Onspring AI

-  **Intelligent Recommendations:** Surface relevant links between controls and policy documents or let Onspring recommend the best-suited analyst to handle an issue, eliminating the need for multiple searches to find relevant information.
-  **Duplicate Detection:** Safeguard data integrity by assessing new records for duplicates across various GRC activities.
-  **Optical Character Recognition (OCR) & Summarization:** Automate reading and summarizing documents like audits and policies and let Onspring AI populate relevant fields to improve business cycle times.
-  **Prompt Workbench:** Define business-specific context to guide results, including tone, terminology and formatting, ensuring Onspring AI consistently delivers information that's accurate, relevant and tailored exactly to how you do business.

The Onspring Difference

-  Omni-data Connectivity
-  Made to Scale Up and Out
-  No-code, Self-sustaining Administration

An Adaptive, Integrated GRC Platform

Onspring was built to connect processes, data and teams across the enterprise. With real-time visibility into risk posture, security controls and accountability measures, Onspring gives organizations a complete view of their governance, risk and compliance landscape. The platform is fully configurable, allowing users to create automations, unify workflows and scale their programs.

Platform Features

Live reporting

Real-time data aggregation in tables, graphs and maps that drill directly to details

Executive dashboards

Deliver insights and communicate activities in a role-based command center

Data references

Relate data points to impacted policies, controls, requirements, regulations, and frameworks

Formulas

Calculate values from multiple data records and APIs to measure real-time status or risk posture

Surveys

Send assessments, attestations and surveys on an automatic schedule or ad hoc

Access control

Set permissions by user to create, read-only, edit and delete

Task management

Assign individual tasks and track completion by team member, due date, budget and priority

Integrations

Consolidate third-party monitoring services and your favorite tech

Ready-made

Start immediately with out-of-the-box workflows and reports; just add your data

Make it your Own

Edit and create new workflows and reports on your own without IT or dev resources

End-to-end management

Unify all angles of your GRC ecosystem to fully access, prioritize, manage and monitor ever-evolving risks and compliance

Connected

Connect with any team or any technology in your enterprise

Real ROI

increase in employee efficiencies

reduction in redundant tasks

wait to update workflows and reports

Onspring Customer Success

"Hands down the best system we evaluated. We could tell the services we would receive was the service that worked best for our model"

- MAGELLAN MINSTREAM PARTNERS

"I love that I don't need an IT degree to be a successful & effective system administrator. We are ideating more processes to automate in Onspring"

- MASCO

Onspring is transforming the way enterprises automate their business processes to stay ahead of risk

Onspring is a connected, adaptive GRC platform designed to unify processes, data and teams across the enterprise. Achieve comprehensive, real-time visibility into your risk posture, security controls and compliance status, transforming scattered information into actionable intelligence.

Trusted by organizations across diverse industries, Onspring modernizes GRC, moving beyond fragmented, reactive approaches to integrated, proactive oversight.
